Which states deliver better cost efficiency?

Name the Hospitals that charge high but receive low payments?

Identify top performers for benchmarking best practices?

Business Problem

Hospitals face a major gap between the billed amount and the actual reimbursements received. Management lacks visibility into which procedures, hospitals, or regions are driving these payment inefficiencies.

Insights

Key Drivers: *DRG type* and *Average covered charges* are the strongest predictors of hospital payments.

Payment Gap: On average, hospitals receive less than what they bill (highlighting revenue leakage areas).

Payment Efficiency: Most hospitals operate below 70% efficiency; certain regions show even poorer cost recovery.

Medicare Dependency: Some providers rely heavily on Medicare reimbursements, posing policy and financial risks.

Volume Impact: *Total Discharges* show minimal correlation with payment size - higher patient volume doesn't guarantee higher revenue.

Focus Areas: Targeting the *Top 10 DRGs* and *Top 10 hospitals* with the largest payment gaps will yield the highest improvement potential.
